

Snapshot choice: vary T, hold N = 2

13 tasks | Both methods restart at t = 1 and run two updates to t = 0; only the cached initialization rule changes.

T = 0.2 | warmreset T = 0 | resetfinal

Task-level point estimates differ despite equal aggregate success (70.77%).

50 matched episodes per task and setting. Task bars are point estimates; mean error bars are exploratory 95% bootstrap intervals.
