

Inference budget: vary N, hold T = 0

Same 8 tasks at every budget | All settings start from the cached final action; the uniform step size is -1/N.

N = 1 | resetfinal N = 2 | resetfinal N = 3 | resetfinal

Two steps have the highest observed mean on this eight-task set; task-level trends differ.

50 matched episodes per task and setting. Task bars are point estimates; mean error bars are exploratory 95% bootstrap intervals.
