

GR00T N1.5 x libero_10 — gate-threshold Pareto

Overlay: same axes, same frozen A pool, matched library scale (~50 trajectories, ~5/task; Pi0.5's cs arm is the same cache_size S3 construction).
 Differs: executor and retrieval recipe — key builder, embedding space, separately tuned weights. Open stars = Pi0.5 gate-only.

gate-threshold Pareto, 2026-08-25, teacher-rate axis only
