

Trajectory lengths before and after removing failures

Largest S6 cache libraries · Failures excluded using recorded success labels

LIBERO Spatial

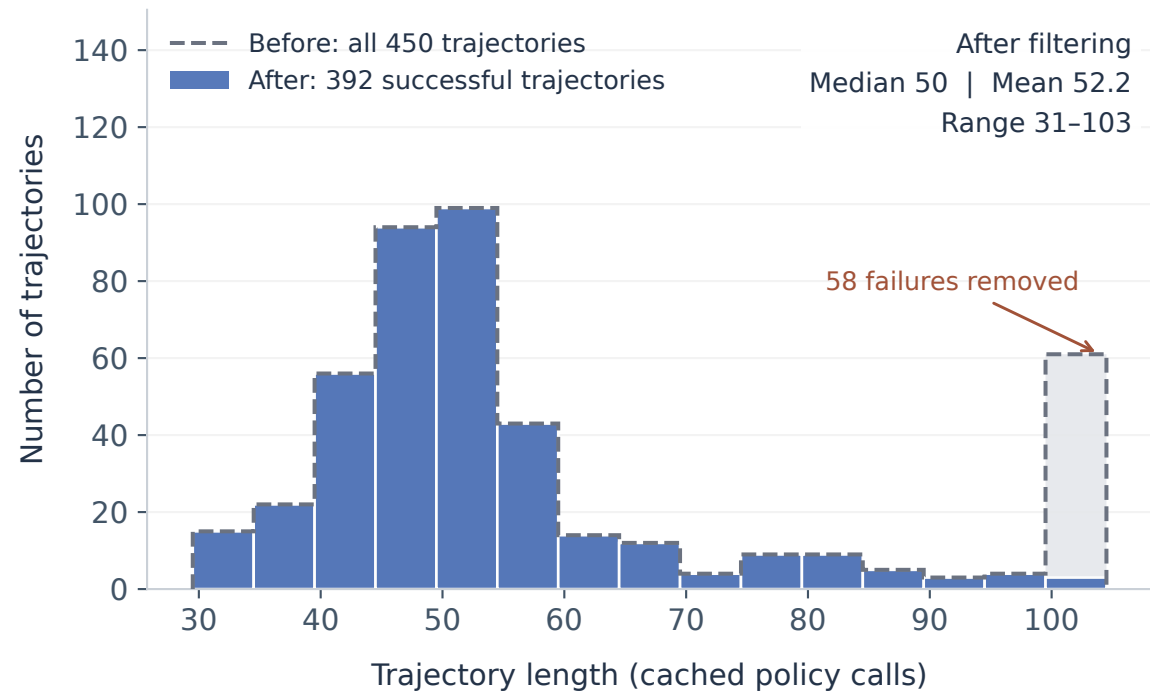

Mean: 21.8 → 21.3 calls · Retained: 97.6% · Bin width: 2

Dashed outline: original distribution. Colored bars: successful trajectories only.

Lengths are stored policy decisions, not individual environment actions; filtering uses outcomes, not a length cutoff.

LIBERO-10

Mean: 58.9 → 52.2 calls · Retained: 87.1% · Bin width: 5

Dashed outline: original distribution. Colored bars: successful trajectories only.

Lengths are stored policy decisions, not individual environment actions; filtering uses outcomes, not a length cutoff.
